	Temperature	Dissolved Salt	Volume of Water	Density
Pure Water	25°C	0 g	100 ml	1.0 g/ml
Salt Solution	25°C	10 g	100 ml	?

The incomplete table above compares some data for pure water and for a salt solution.

What is the density of the salt solution?

(Check one box.)

- 1.0 g/ml
- Less than 1.0 g/ml
- Greater than 1.0 g/ml

Explain your answer.

Note: To receive credit, responses must check >1g/ml AND give an explanation. Credit will be given both for higher-level explanations based on the added mass from dissolved salt (Code 10) as well as responses with minimal explanations indicating factual knowledge that the density of salt water is greater (Code 11).

Code	Response	Item: S032565
Correct Response		
10	<p>>1g/ml with an explanation based on the added mass from dissolved salt (and the volume staying essentially the same). <i>Examples:</i> <i>When the salt is added to the water, it dissolves and gives into the water another g/ml.</i> <i>Pure water has 0 g of salt and 100 ml water. If salt solution has 10 g more salt than pure water, the density should be greater than 1g/ml.</i> <i>As the dissolved salt increases, the density will increase because of the increase in mass which makes the particle per unit more.</i> <i>The density is 1.1 g/ml [(100g of water + 10g of salt)/100 ml]</i></p>	
11	<p>>1g/ml with minimal explanation. <i>Examples:</i> <i>The density always goes up when you add salt.</i> <i>Salt will make the water heavier.</i> <i>There is more salt which has dissolved.</i> <i>Impure solutions have greater densities.</i> <i>Because it's salt water. Pure water doesn't have any salt in it.</i></p>	
19	Other correct	
Incorrect Response		
70	<p>>1g/ml with no explanation or an incorrect explanation. <i>Examples:</i> $25 \times 100/10 = 20.5 \text{ g/ml}$ <i>You will need more hot water to dissolve the salt.</i></p>	
71	<p>1g/ml with or without explanation. <i>Examples:</i> <i>The salt just dissolves and nothing happens.</i> <i>Salt solution equals pure water.</i></p>	
72	<p><1g/ml with or without explanation. <i>Examples:</i> <i>Salt disappears when it dissolves.</i> <i>The more you heat the salt, the quicker it will dissolve. So, in the end nothing will be left.</i> <i>Density is 0.1 g/ml (10g salt /100 ml).</i></p>	
79	Other incorrect (including crossed out/erased, stray marks, illegible or off task)	
Nonresponse		
99	Blank

Which statement is true about the particles of a liquid compared to the particles of a gas?

- (A) Particles of a liquid are slower and farther apart.
- (B) Particles of a liquid are faster and farther apart.
- (C) Particles of a liquid are slower and closer together.
- (D) Particles of a liquid are faster and closer together.

The figure shows an iron nail with an insulated wire coiled around it. The wire is connected to a battery.

What will happen to the nail when current flows through the wire?

- (A) The nail will melt.
- (B) Electric current will flow through the nail.
- (C) The nail will become a magnet.
- (D) Nothing will happen to the nail.

Note: To receive credit, a response must include an explanation. Responses that only give the name of a process/agent without further explanation are scored as incorrect (Code 70). Destructive forces due to sudden action are scored as incorrect (Code 71), as they are not the result of a gradual weathering process.

Code	Response	Item: S032019A
	Correct Response	
10	Identifies a physical process or agent and explains how it can cause weathering. <i>Examples:</i> <i>Rocks expand and contract due to changes in temperature.</i> <i>Water collects in cracks and freezes and causes the rocks to break apart.</i> <i>Water pours down a rock face, causing it to weather.</i> <i>Wind blowing across rocks causes pieces to break off.</i> <i>Rain slowly makes rocks break down.</i> <i>Glaciers or water can cause rocks to break away.</i> <i>When water runs down a stream it carries away tiny pieces of rock downstream.</i> <i>Plants grow into the cracks of rocks.</i>	
19	Other correct	
	Incorrect Response	
70	Names a physical process or agent without further explanation. <i>Examples:</i> <i>Erosion, wind, rain, weather, exfoliation.</i>	
71	Refers to a destructive force caused by sudden action (not the result of a gradual weathering process). <i>Examples:</i> <i>Rocks can be broken down using the force of a hammer.</i>	
79	Other incorrect (including crossed out/erased, stray marks, illegible, or off task)	
	Nonresponse	
99	Blank	

The weathering (gradual breaking down) of rocks can be caused by both physical and chemical processes. Write down one physical process and one chemical process. Explain how each can cause the weathering of rocks.

Physical Process:

Chemical Process:

Note: To receive credit, a response must include an explanation. Responses that only give the name of a process/agent without further explanation are scored as incorrect (Code 70).

Code	Response	Item: S032019B
	Correct Response	
10	Identifies a chemical process or agent and explains how it can cause weathering. <i>Examples:</i> <i>Oxygen combines with metals in rocks to break them down.</i> <i>Carbon dioxide dissolved in water dissolves limestone.</i> <i>Acid rain can affect rocks by disintegrating them slowly.</i> <i>When we don't dispose of our waste properly it may contain some substance that can break down the rocks when it seeps into the soil.</i> <i>Chemicals secreted by living organisms such as lichen and mosses dissolve rock.</i> <i>Some chemicals (maybe acid) that is put onto rocks will react with the elements and cause it to erode.</i>	
19	Other correct	
	Incorrect Response	
70	Names a chemical process or agent without further explanation of how it causes weathering. <i>Examples:</i> <i>Acid rain.</i> <i>Acid.</i> <i>Lava and fire.</i> <i>It is a chemical process when two or more substances are joined.</i> <i>Rocks are broken down by mixing up chemicals.</i> <i>A chemical seeps into the rocks.</i>	
71	Identifies a physical process. <i>Examples:</i> <i>Erosion and wind.</i> <i>Melting.</i> <i>Water gets in and creates cracks and it collapses.</i>	
79	Other incorrect (including crossed out/erased, stray marks, illegible, or off task)	
	Nonresponse	
99	Blank	

TIMSS2007**Science****Eighth Grade**

In a rural area, there are many trees. The people living in the area decide to cut down the trees for wood.

Give one possible long-term effect of their decision on the environment.

Lynch School of Education, Boston College

Note: Credit is given both for responses that give a negative (Code 10) or a neutral/positive (Code 11) long-term effect on the environment (plants/animals, land, water, atmosphere, etc.). Responses that refer only to the loss of trees or an effect on humans are scored as incorrect. If more than one effect is included, the code corresponding to the first correct effect should be given even if other incorrect effects are included. Since only one effect is asked for, the incorrect portion is not considered unless it negates the correct portion of the response.

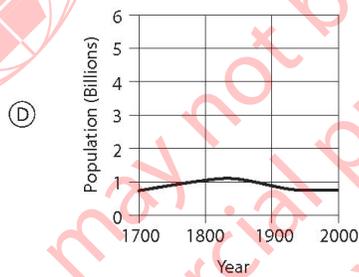

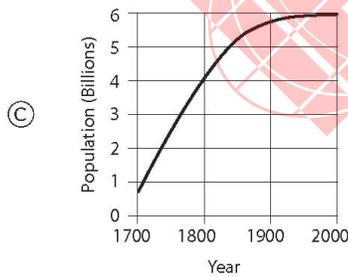

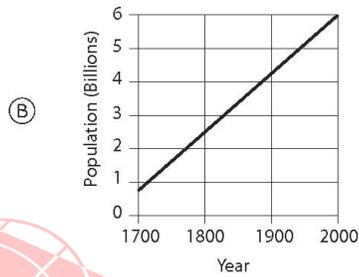

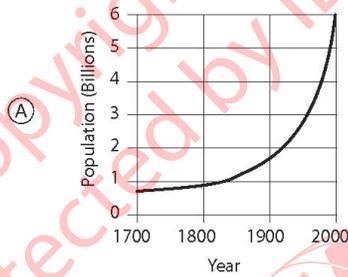

Code	Response	Item: S032516
	Correct Response	
10	<p>States a negative effect on the environment (e.g., loss of habitat for plants/animals, soil erosion, atmospheric changes, desertification, changes in rainfall, etc.).</p> <p><i>Examples:</i></p> <p><i>Some animals will lose their homes and die.</i></p> <p><i>It can affect the animals because some of them need to eat off the trees.</i></p> <p><i>Animals will die or move to another location.</i></p> <p><i>No trees to absorb water, therefore rain and wind will erode the soil.</i></p> <p><i>There will be floods a lot more often.</i></p> <p><i>It will lead to global warming because the trees won't use up carbon dioxide anymore.</i></p> <p><i>There will be no more trees to give off oxygen.</i></p> <p><i>When all the trees are cut down there will be less rain in the area.</i></p> <p><i>The area can become like a desert without any trees.</i></p>	
11	<p>States a neutral or positive effect on the environment (e.g., a change in the balance of plant life, increased habitat for some types of animals/plants, etc.).</p> <p><i>Examples:</i></p> <p><i>When all the trees are cut down there will be more room for some types of animals and plants.</i></p> <p><i>Different types of plants could now grow there.</i></p>	
19	Other correct	
	Incorrect Response	
70	<p>Mentions only the loss of trees.</p> <p><i>Examples:</i></p> <p><i>All the trees might eventually be gone.</i></p> <p><i>The trees will take a long time to grow back.</i></p>	
71	<p>Mentions only an effect related to human use of wood or cleared land. [Long-term effect on the environment not clear.]</p> <p><i>Examples:</i></p> <p><i>They would have more firewood.</i></p> <p><i>More free space for houses, malls and businesses.</i></p> <p><i>Won't have enough trees in the future for stuff like houses and paper.</i></p>	
79	Other incorrect (including crossed out/erased, stray marks, illegible, or off task)	
	Nonresponse	
99	Blank

Look at the list of organisms (plants and animals) below. They all live in the Neritic Zone.

Organism	Description
Phytoplankton	Microscopic plants that photosynthesize
Zooplankton	Microscopic animals that feed on phytoplankton
Tuna	Medium sized fish that feeds on small fish
Herring	Small fish that feeds on zooplankton
Shark	Large fish that feeds on other fish
Whale	Large mammal that feeds on zooplankton

- A. Complete the food web on the chart below to include all the organisms listed in the table. Write the name of one organism in each circle.

The information given about each organism will help you. Three organisms have been placed on the chart for you. The arrows show the direction that energy flows through the food web.

Note: For credit, responses must include an explanation that is consistent with the food web and considers other food sources for the shark. Credit is given for responses that do not consider other food sources but are consistent with the simple food chain (tuna → shark) in the correct food web (Code 10). Any other statement without explanation is scored as incorrect (Code 70). Responses that indicate ONLY that the sharks will become extinct are also scored as incorrect (Code 71). Other correct responses may be possible based on an incorrect food web in Part A. In these cases, the 19 code should be used if the explanation is consistent with the food web.

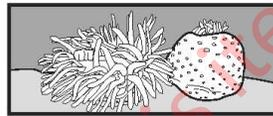

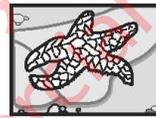

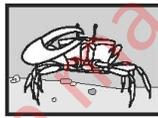

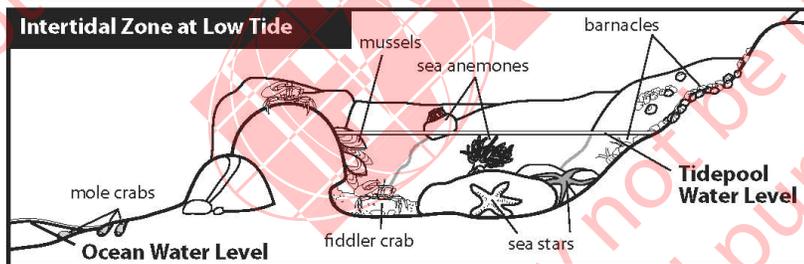

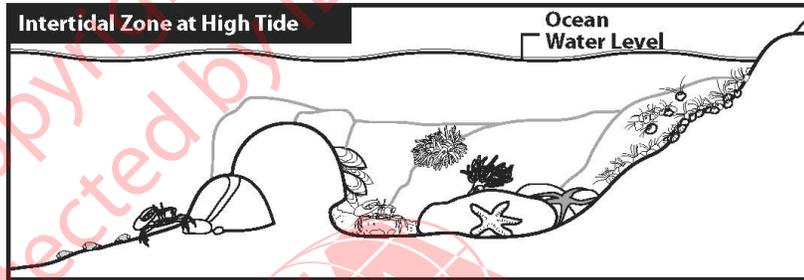

Code	Response	Item: S032693B
Correct Response		
10	States that sharks will decrease (or similar) with no further explanation or an explanation based only on the direct effect of tuna. [No consideration of other food sources included.] <i>Examples:</i> <i>The shark population will decrease.</i> <i>The sharks will decrease because they don't have tuna to eat.</i> <i>The sharks will decrease and eventually die because of less food.</i> <i>The sharks will eventually starve to death when there is no food.</i> <i>All the sharks will get hungry and die.</i>	
11	Gives a correct explanation based on the correct food web that considers other food sources for the shark (explicitly or implicitly). <i>Examples:</i> <i>The sharks might have a slight decrease since there is no tuna, but they can also eat the herrings.</i> <i>The shark population stays the same since they will eat other types of food.</i>	
19	Other correct	
Incorrect Response		
70	States that sharks will increase or stay the same with no explanation (inadequate for evaluating correctness based on food web). <i>Examples:</i> <i>The sharks would stay the same.</i>	
71	States only that sharks will become extinct. [Reflects a misunderstanding of food webs.] <i>Examples:</i> <i>The sharks will become extinct.</i>	
79	Other incorrect (including crossed out/erased, stray marks, illegible or off task)	
Nonresponse		
99	Blank

Note: For full credit, responses must identify an organism in the diagram, describe a feature or behavior of this organism, AND explain how this feature/behavior helps the organism to survive at least one effect of low tide: lack of water, lack of food, exposure to predators or elements, changes in salinity, or effects of wave action. Following is a list of specific features/behaviors expected for each organism and the effect of low tide that the adaptation helps the organism to survive. All of the organisms also have special gill structures that allow them to exchange gases (oxygen/carbon dioxide) with very little water, and this also is to be considered as a correct response.

Sea Anemones	Close up (lack of water, salinity, predators); live in clusters (lack of water reduces exposed body surface area); attach to rocks (wave action)
Mole Crabs	Burrow into the sand (lack of water, predators); hard shell (wave action, lack of water, predators)
Mussels and Barnacles	Attach to rocks (wave action); hard shell (wave action, lack of water, predators); close up (lack of water, salinity, predators); lowers metabolism rate (lack of food, lack of water for removing toxic waste build-up)
Fiddler Crabs	Burrow into sand or crawl into crevices (lack of water, predators); legs/mobility (lack of water/food, predators); hard shell (wave action, lack of water, predators)
Sea Stars	Suction cups/attach to rocks (wave action); tube feet/mobility (lack of water/food, predators, gas exchange); hard/spiny surface (wave action, lack of water, salinity, predators)

Code	Response	Item: S032695
	Correct Response	
20	Identifies an organism, describes a feature/behavior, AND gives an explanation. <i>Examples:</i> <i>Sea anemones. They close up. It keeps them from drying out during low tide.</i> <i>Mole crabs. They dig into the sand, They are not exposed at low tide.</i> <i>Mussels. They have hard shells. They can store water inside their shells.</i> <i>Fiddler crabs. They have legs and can crawl into the tidepool and rocks to find food.</i> <i>Barnacles. They close up and have hard shells. The predators cannot eat them.</i> <i>Sea stars. Suction cups on their legs. Attach to the rocks and not get swept to sea.</i>	
29	Other fully correct	
	Partial Response	
10	Identifies an organism and describes a feature/behavior; NO explanation or inadequate explanation given. <i>Examples:</i> <i>Sea Anemones. They close up; Mole crabs. They can dig into the sand; Mussels. Have shells.</i>	
19	Other partially correct	
	Incorrect Response	
70	Only identifies an organism from the diagram but with no or incorrect description of feature/behavior.	
79	Other incorrect (including crossed out/erased, stray marks, illegible or off task)	
	Nonresponse	
99	Blank	

TIMSS2007**Science****Eighth Grade**

Fewer species of organisms (plants and animals) have been found living in the depths of the oceans than in the regions closer to the surface. Organisms living at the bottom of the ocean must be adapted to the conditions there.

Name two conditions that are found at the bottom of the ocean that make it difficult for most plants and animals to live there.

1.

2.

Note: Each of the two responses is coded separately. Each correct diagnostic code (10,11,12,13) may be used only once. If the two responses are essentially the same, the second response should be coded as 79. For example, if a response states “the sunlight cannot penetrate that deep” and “not enough light for photosynthesis”, then the first response is given Code 10, and the second is given a Code 79. If only one response is given, the second should be given Code 99.

Code	Response	Item: S032697A,B
	Correct Response	
10	Mentions lack of light.	
11	Mentions low temperatures.	
12	Mentions high pressure.	
13	Mentions lack of food.	
19	Other correct <i>Examples:</i> <i>It is too salty at the bottom, so some species cannot live there.</i> <i>There are poisonous gases from volcanic vents at the bottom of the ocean.</i> <i>Low visibility.</i>	
	Incorrect Response	
70	Mentions only lower oxygen (carbon dioxide, air) levels in deep water. [NOT a general condition found at great ocean depths.] <i>Examples:</i> <i>There would not be enough oxygen for the fish to breathe.</i> Note: While lower oxygen levels do occur in some regions of the ocean, it is not a general condition that exists purely due to depth (gas saturation increases with decreasing temperature and increasing pressure). The level of oxygen is a complex function of depth with a minimum-oxygen zone in the 500 – 1000 meter range, related to the breakdown of organic matter below the photic zone and convection that mixes the deep ocean water. Responses that refer ONLY to low oxygen levels will, therefore, be scored as incorrect. For more sophisticated responses that describe the minimum oxygen zone at intermediate depths, a Code 19 may be given.	
71	Mention only predators (or similar). [NOT specific to the bottom of the ocean.]	
79	Other incorrect (including crossed out/erased, stray marks, illegible or off task)	
	Nonresponse	
99	Blank

- Note:** i) Explanations that specifically mention the following should receive Code 10:
- a) Humans being warm blooded OR
 - b) Temperature remaining constant at 37 degrees C or 98.4 degrees F OR
 - c) The body only being able to function within a small range of temperatures OR
 - d) References to sweating, shivering, etc., as mechanisms for maintaining constant body temperature. (Responses that only state sweating, shivering, etc. without further explanation should be given code 70).
- ii) If the numerical value is incorrect, but the concept is correct, score as Code 10.

Code	Response	Item: S042011
	Correct Response	
10	<p>The same in both climates with a specific explanation as indicated in the note above.</p> <p><i>Examples:</i></p> <p><i>Humans are warm blooded so they don't rely on the climate to change body temperatures.</i></p> <p><i>The body temperature is the same in all humans.</i></p> <p><i>It's 98.6.</i></p> <p><i>The same in both climates because all body temperatures are around the same degrees.</i></p> <p><i>People in hot climates sweat to maintain their body temperature.</i></p> <p><i>People in hot climates sweat to keep their temperature constant and people in cold climates need to wear much heavier clothing.</i></p>	
	Incorrect Response	
70	<p>The same in both climates with a vague, incorrect or no explanation.</p> <p><i>Examples:</i></p> <p><i>I think it would be the same because your body doesn't change just because of the temperature.</i></p> <p><i>Body temperature is not affected by the surrounding environment.</i></p> <p><i>Sweating.</i></p> <p><i>The people in hot climates will try to keep themselves cool while the people living in cold climates will try to keep themselves warm.</i></p>	
71	<p>Higher in hot climates with or without an explanation.</p> <p><i>Examples:</i></p> <p><i>The blood and body are warmed by the hot climate.</i></p> <p><i>Because in an atmosphere with higher temperature, our body temperature increases too.</i></p> <p><i>The weather is hotter, so the body temperature average will be slightly larger and vice versa with colder climates.</i></p>	
72	<p>Lower in hot climates with or without an explanation.</p> <p><i>Examples:</i></p> <p><i>In hot climates, our bodies will try to adapt to it by giving out heat by the nerves. In cold climates, our bodies will also try to adapt to it by preventing heat loss.</i></p> <p><i>The people living in hot climates need lower body temperature so that they would not feel that hot.</i></p>	
79	Other incorrect (including crossed out, erased, stray marks, illegible, or off task)	
	Nonresponse	
99	Blank

See scoring guide

Code	Response	Item: S042106
	Correct Response	
10	110 grams with an explanation that refers to conservation of mass (or nothing lost or gained). <i>Examples:</i> <i>The mass of the reactants equals the mass of the products.</i> <i>No extra substances were added.</i> <i>If you mix A and B together to get C, the weight will not change.</i>	
11	Less than 110 grams with an explanation that refers to gas production. <i>Examples:</i> <i>Maybe a gas is produced that escapes, so the mass would change.</i>	
	Incorrect Response	
70	110 grams with an incorrect or no explanation. <i>Examples:</i> <i>The same because there is liquid in figure 2.</i>	
71	Less than 110 grams with an incorrect or no explanation. <i>Examples:</i> <i>Figure 2 has no substance B in the beaker. So it may be much lighter than figure 1.</i> <i>Because if the solid B was a solid, it would weigh more.</i>	
72	More than 110 grams with an incorrect or no explanation. <i>Examples:</i> <i>The mass of the solid (B) increases when heated as it expanded. Thus adding on to the weight.</i> <i>Because substance B is mixed with substance A, so I think it will be heavier.</i>	
79	Other incorrect (including crossed out, erased, stray marks, illegible, or off task)	
	Nonresponse	
99	Blank

- Note:** i) If more than one correct response is given, priority should be given to Code 10, then Code 11, then Code 12.
 ii) Responses that check physical change and describe chemical change should receive Code 71.

Code	Response	Item: S042101
Correct Response		
10	Chemical change and explains that the milk had become acidic. <i>Examples:</i> <i>The acidity changed. This shows that chemical s are reacting which results in the change.</i> <i>The milk has turned acid, thus the litmus paper turned red.</i> <i>The milk changed from a base to an acid.</i> <i>The bacteria in milk turned sugar into acid.</i>	
11	Chemical change and explains that new substances are forming (chemical reaction taking place) OR mentions decomposition/fermentation. <i>Examples:</i> <i>The milk has started to decompose which is a chemical change.</i> <i>The milk became sour and cannot be drunk. A chemical change has occurred because a new substance is formed.</i>	
12	Chemical change and explains that bacteria have grown (and "spoil" the milk). <i>Examples:</i> <i>The milk turned sour from bacteria.</i> <i>Because there were bacteria in it.</i>	
13	Chemical change with an explanation referring to differences between physical and chemical changes. <i>Examples:</i> <i>Chemical changes are irreversible, while physical changes are reversible.</i> <i>The milk cannot be transformed back into its original state, thus it is chemical.</i>	
19	Other correct <i>Examples:</i> <i>The milk would have started to go bad.</i> <i>The milk has spoilt so it is a chemical change.</i>	
Incorrect Response		
70	Chemical change with an incorrect or no explanation. <i>Examples:</i> <i>The milk was older so it caused the chemicals in the milk to change.</i>	
71	Physical change with or without an explanation. <i>Examples:</i> <i>After 2 days, bacteria have entered the milk, making the milk spoil. Thus there is a change in color and taste of the milk.</i> <i>A physical change took place as the change cannot be reversible.</i>	
79	Other incorrect (including crossed out, erased, stray marks, illegible, or off task)	
99	Blank

- B. Peter and Joan read that six men could together lift a stone weighing 30,000 Newtons. Each man would then need to be able to lift one sixth of this weight (5,000 Newtons). They decided to work out how much effort each man had to exert on his wooden pole.

Peter added the length of each lever arm to Joan's diagram as shown below.

He looked up the following formula in a textbook:

$$\frac{\text{force exerted by load}}{\text{force exerted by effort}} = \frac{\text{length between effort and fulcrum}}{\text{length between load and fulcrum}}$$

How much force does each man have to exert to lift the block?

_____ Newtons

In a deep valley on Earth, a person shouting will hear an echo as the sound is reflected back off the surrounding mountains. In a similar valley on the Moon, no echo will be heard. This is because

- (A) the gravitational pull on the Moon is too low
- (B) the temperature on the Moon is too low
- (C) there is no air on the Moon for the sound to travel through
- (D) the mountains on the Moon cannot reflect sound

The Central City Power Station burns coal to generate power for the city. As the coal burns, sulfur that is present in the coal reacts with oxygen to form sulfur dioxide, which is given off as a gas.

How does this process result in acid rain?

Note: To receive credit, responses must include some reference to a chemical reaction of sulfur dioxide in the atmosphere or an interaction involving sulfur dioxide and water (clouds) in the atmosphere (mixing, dissolving, etc.). Naming a specific acid formed (sulfuric or sulfurous) is not required to receive a Code 10.

Code	Response	Item: S022244
Correct Response		
10	Refers to a chemical reaction of sulfur dioxide (with water) in the atmosphere (to form acid). <i>Examples:</i> <i>The sulfur dioxide changes into sulfuric acid when it combines with water in the atmosphere.</i> <i>The sulfur dioxide reacts with water vapor in clouds to form acid.</i> <i>A reaction takes place when sulfur dioxide mixes with the clouds.</i> <i>The sulfur dioxide changes to sulfuric acid when it reacts with the air.</i> <i>A reaction takes place when sulfur dioxide gets into the atmosphere.</i>	
11	Refers only to the mixing or dissolving of the sulfur dioxide in the water (or clouds) in the atmosphere. (No explicit mention of a reaction). <i>Examples:</i> <i>The gas mixes in the water vapor. Then when the vapor condenses, it falls with the water making acid rain.</i> <i>The sulfur dioxide has acid in it, and that goes into the clouds and rains down.</i>	
19	Other correct	
Incorrect Response		
70	Refers only to the evaporation and/or formation of sulfur dioxide clouds. (Confuses acid rain with steps of water cycle; no mention of mixing with water or clouds). <i>Examples:</i> <i>When it evaporates, it forms clouds and generates acid rain.</i> <i>The gas rises and when there is too much, it rains.</i> <i>The sulfur dioxide condenses to form clouds of acid rain.</i>	
79	Other incorrect (including crossed out/erased, stray marks, illegible, or off task)	
Nonresponse		
99	Blank

Note: A fully correct response must include the following elements relating the change in heart rate to the physiological needs during exercise and the role of the circulatory system:

- i) need for more oxygen, energy, food, waste product removal, etc., during exercise
- ii) role of circulatory system (increased blood flow to meet the needs during exercise).

Partial credit is given for responses including some reference to either the physiological needs during exercise (i) OR the circulatory system (ii).

Code	Response	Item: S022289
Correct Response		
20	Response includes BOTH elements (i) and (ii) above. <i>Examples:</i> <i>Your heart has to pump more blood because your cells need more oxygen during exercise.</i> <i>Your blood is moving faster to carry oxygen to your cells and carry away wastes.</i>	
29	Other fully correct	
Partial Response		
10	Response includes element (i) only (need for oxygen, energy, etc., without mentioning blood circulation). <i>Examples:</i> <i>The body needs more oxygen and energy.</i> <i>The heart pumps faster to supply more oxygen.</i>	
11	Response includes element (ii) only (increased blood flow without mentioning the need for more oxygen, energy, etc.) <i>Examples:</i> <i>The heart pumps blood faster.</i> <i>The blood flows faster.</i>	
12	Refers to the need for air rather than oxygen (with or without mention of blood). <i>Examples:</i> <i>When I exercise, my heart needs to pump more air to my muscles.</i>	
19	Other partially correct	
Incorrect Response		
70	Mentions ONLY an effect due to exercise (working hard, straining the body, speeding up of bodily processes, breathing hard, etc.) without mentioning physiological needs or blood circulation. <i>Examples:</i> <i>Because of the exercise, you are pushing your body.</i> <i>When you exercise your pulse rate always increases.</i> <i>Everything speeds up when you exercise hard.</i> <i>You start breathing faster and faster.</i>	
79	Other incorrect (including crossed out/erased, stray marks, illegible, or off task)	
Nonresponse		
99	Blank

Note: A correct response must indicate 100° C (equal, same) and include a correct explanation based on water boiling (phase change) occurring at a constant temperature.

Code	Response	Item: S022069
Correct Response		
10	100° C (equal). With a correct explanation based on water boiling at a constant temperature. <i>Examples:</i> <i>Equal. The boiling point of water is 100 degrees.</i> <i>100° C. Because that is the highest boiling point.</i> <i>Equal. Water boils at 100° C no matter what.</i> <i>Equal. It only takes 100° C to boil water. The excess energy evaporates the water.</i> <i>Equal. Because it is still at its boiling point of 100° C.</i>	
Incorrect Response		
70	100° C (equal). With no explanation or an incorrect explanation. <i>Examples:</i> <i>Equal. Not enough time to heat up.</i> <i>100° C. Because that is how high the thermometer goes.</i>	
71	Greater than 100° C. With no explanation or an incorrect explanation. <i>Examples:</i> <i>Greater. Because if he heated it again it would still be hot from last time.</i> <i>Greater. Because it was on there longer.</i> <i>Greater. Because the heat went up.</i> <i>Greater. Because he turned the temperature up on the elements.</i> <i>Greater. That is the boiling point. If he left it long enough it would evaporate.</i> <i>Greater. It goes up every second.</i> <i>Greater. The boiling point is 100° C, but it can still get hotter before it evaporates.</i> <i>Greater. Boiling water can reach temperatures of 100° C.</i>	
72	Less than 100° C. With no explanation or an incorrect explanation. <i>Examples:</i> <i>Less. Because if it is not boiling, it is below the boiling point of 100° C.</i> <i>Less. As the water boils away, the boiling point drops.</i> <i>Less. It is not on the heat anymore.</i>	
79	Other incorrect (including crossed out/erased, stray marks, illegible, or off task)	
Nonresponse		
99	Blank	

Pauline took two small identical containers and filled them with the same amount of water. She dissolved a tablespoon of salt in one of them and placed both containers in a freezer. Pauline then observed them every five minutes until one of them had frozen.

What can Pauline find out from her experiment?

Note: To receive credit, responses must be related to the relative rates of freezing for fresh and salt water. Responses may include either a statement of the problem being investigated in the experiment (determining the effect of salt on the freezing point (rate) of water) for Code 10 or a conclusion based on prior scientific knowledge (e.g. the fresh water will freeze first) for Code 11. Explanations based on knowledge of practical applications of salt lowering the freezing point of water should be given Code 19.

Code	Response	Item: S022268
	Correct Response	
10	Response includes a statement of the problem: determining the effect of (dissolved) salt on freezing (point, rate, temperature) of water. <i>Examples:</i> <i>Find out if salt affects freezing water.</i> <i>She can find out which container freezes first.</i> <i>She can find out if water freezes easier with dissolved salt or without dissolved salt.</i>	
11	Response includes a conclusion of the relative rates of freezing (or freezing points, temperatures) based on prior scientific knowledge. <i>Examples:</i> <i>Regular water will freeze before salt water will.</i> <i>The salt water will not be frozen yet.</i>	
19	Other correct	
	Incorrect Response	
70	States that the salt water would freeze first. <i>Examples:</i> <i>Salt water will freeze first because it has a solid in it.</i> <i>The plain water will not be frozen yet.</i>	
71	States that salt water will never freeze (or similar). [Extrapolation beyond the conditions of experiment.] <i>Examples:</i> <i>The container with salt in it will never freeze.</i> <i>Salt water cannot freeze because of the salt crystals.</i>	
79	Other incorrect (including crossed out/erased, stray marks, illegible, or off task)	
	Nonresponse	
99	Blank

Note: If the diagram is correctly labeled with N and S, but the explanation is minimal or not provided, code as 20.

Code	Response	Item: S042292
Correct Response		
20	Refers to unlike poles (NS or SN) AND like poles (NN or SS). Attraction and repulsion may or may not be mentioned. <i>Examples:</i> 1. Magnets X and Y touch each other because the north and south poles were facing. 2. Magnets Y and Z remain separated because they may have had south and south or north and north facing each other. 1. Magnets X and Y attract each other as they have unlike poles facing each other. 2. Magnets Y and Z repel as they have like poles facing each other.	
Partially Correct Response		
10	Refers to unlike poles (NS or SN) OR like poles (NN or SS). Attraction and repulsion may or may not be mentioned. <i>Examples:</i> 1. Side Y is facing side X (incorrect). 2. The side of Y facing Z has the same, e.g. south and south (correct). 1. Magnets X and Y attract because they aren't the same (correct). 2. Magnets Y and Z remain separated because they are north and south (incorrect).	
11	Mentions attraction and/or repulsion but does not explain why. <i>Examples:</i> 1. Magnets X and Y touch each other because the magnetic forces pull the magnets together. 2. Magnets Y and Z remain separated because the magnetic forces push apart. 1. Magnets X and Y touch each other because specific sides of a magnet attract. 2. Magnets Y and Z remain separated because specific sides of a magnet resist.	
Incorrect Response		
70	Responses reverse the the poles (i.e., like poles attract and unlike poles repel). <i>Examples:</i> 1. Magnets X and Y touched together because they found south and south together. 2. Magnets Y and Z remained separate because they were north and south.	
71	Responses refer to negative and positive sides. <i>Examples:</i> 1. Magnets X and Y have opposite sides that faced each other so they connected. 2. Magnets Y and Z have the same side, either negative or positive facing each other so they didn't connect.	
79	Other incorrect (including crossed out, erased, stray marks, illegible, or off task)	
Nonresponse		
99	Blank

A science class had been assigned to find the density of a can that holds soda. Four groups were formed to do the task. Each group was given a can of soda.

After each group had completed its work, they presented their results, as shown in the table below.

	Group A	Group B	Group C	Group D
Density (g/mL)	1.04	0.04	2.77	1.05

The class was surprised that the results for the densities of the can were so different.

They looked at the methods each group had used to find the mass and the volume of the soda can.

Table 1 shows how each group found the mass of the soda can.

Table 1: Mass

Group	Method	Mass (g)
A	We used a balance to find the mass of the can of soda.	389.30
B	We opened the can and emptied it. We used a balance to find the mass of the soda can.	13.85
C	We opened the can and emptied it. We used a balance to find the mass of the soda can.	13.85
D	We used a balance to find the mass of the can of soda.	389.30

A. Explain why groups A and D and groups B and C found different results for the mass.

C. The table below shows the mass, volume, and density results for each group.

Group	A	B	C	D
Mass (g)	389.30	13.85	13.85	389.30
Volume (mL)	376.00	376.00	5.00	371.00
Density (g/mL)	1.04	0.04	2.77	1.05

Based on the methods used, which group found the density of the metal from which the can was made?

- (A) Group A
- (B) Group B
- (C) Group C
- (D) Group D

Note: Accepted ways that groundwater can become polluted include reference to:

Pesticides
 Fertilizers
 Factory waste
 Chemicals (salt)
 Landfills (rubbish, garbage)
 Acid rain
 Sewage
 Oil
 Leaking pipes

Code	Response	Item: S042149
	Correct Response	
10	Describes one way that groundwater can become polluted. <i>Examples:</i> <i>Pesticides used by the farmers can leak into the ground with rainwater.</i> <i>Disposing of factory waste in water.</i> <i>We bury our litter and waste underground by landfill.</i> <i>Acid rain can make water acidic.</i> <i>Things get absorbed by the soil and seep into the water.</i> <i>Because at dump sites toxic items can be dumped on the land and the toxic liquid absorbed into the ground.</i>	
	Incorrect Response	
79	Incorrect (including crossed out, erased, stray marks, illegible, or off task) <i>Examples:</i> <i>The dirt can become mixed with the water.</i> <i>When stuff is put down sewers and pollutes it.</i> <i>Because of the drains.</i> <i>It can get dirty.</i> <i>Gases in the air turn to vapor.</i>	
	Nonresponse

Note: Accepted explanations include:
 Tree roots bind the soil together.
 Trees absorb a lot of rainwater.
 Trees shelter the soil from water.
 Trees act as a windbreak.

Code	Response	Item: S042155
Correct Response		
10	Refers to one of the explanations as listed in the note above. <i>Examples:</i> <i>The tree's roots grasp hold of soil tightly preventing soil erosion.</i> <i>The roots will absorb a lot of the rainwater.</i> <i>The trees will protect the soil by covering it.</i> <i>A stand of trees will act as a barrier to the wind.</i> <i>The trees will protect the soil from too much wind.</i> <i>The roots of the tree are strong enough to hold the soil in place. So when there is a heavy flood, soil erosion can be prevented as the roots are holding on.</i>	
Incorrect Response		
79	Incorrect (including crossed out, erased, stray marks, illegible, or off task)	
Nonresponse		
99	Blank

Note: A correct response must show the water surface in BOTH arms at an approximately horizontal angle ($\pm 10^\circ$). A template is provided on the following page to aid in determining whether responses are outside the allowable water level range for a correct response (Figure 1). Due to the possibility of acceptable angular errors ($\pm 10^\circ$) in the right arm, the vertical tolerance level for the left arm is greater. Specific incorrect diagnostic codes are included for errors in either the level of water (Code 70) or the angle of the water surface (Codes 71 and 72). See illustrations of example codes on the following page.

Code	Response	Item: S022292
Correct Response		
10	Approximately horizontal surface shown in both arms within allowable limits (Figure 1).	
Incorrect Response		
70	Approximately horizontal surface of water, but with an error such as higher/lower level(s) than allowable range or water level shown in only one arm (Figure 2).	
71	Water surface approximately parallel to the bottom of the U-tube shown in one or both arms (Figure 3). Exact level not important.	
72	Water surface is inclined in the opposite direction to that in Code 71 and $>10^\circ$ off horizontal (Figure 4).	
79	Other incorrect (including crossed out/erased, stray marks, illegible, or off task)	
Nonresponse		
99	Blank

Note: A correct response is based on the relative distances of the Sun and Moon from the Earth. An implicit comparison is accepted for Code 10 as long as it is clear from the student response that a greater distance from the Sun is implied. Actual distances may be used to convey relative distance. The actual distances do not have to be completely accurate as long as they convey the correct relative distance. Responses that mention ONLY the great distance of the Sun OR the close distance of the Moon without comparative language are also scored as correct.

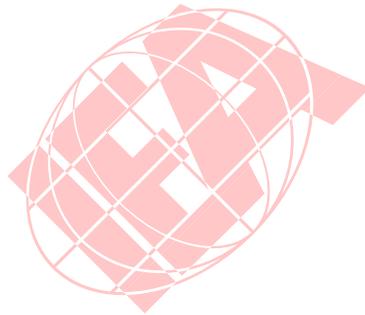

Code	Response	Item: S022078
	Correct Response	
10	Refers to the greater distance of the Sun and/or the shorter distance of the Moon (from Earth), implicitly or explicitly. <i>Examples:</i> <i>The Moon is closer to the Earth than the Sun.</i> <i>The Moon is 400 000 kilometers away and the Sun is 150 million kilometers away.</i> <i>The light takes longer from the Sun because it is so far from Earth.</i> <i>The Moon is very close to Earth</i>	
19	Other correct	
	Incorrect Response	
70	Refers to distance, but explanation does not clearly communicate the effect of either the Sun's or the Moon's distance on the time for light to travel to Earth. <i>Examples:</i> <i>The distance is so long.</i> <i>Because of the distance between them.</i>	
71	Refers only to an effect related to the nature/speed of light (from the Sun), reflection of light off the moon, or absorption of light by the atmosphere (ozone layer). <i>Examples:</i> <i>Because the Moon is closer to the Sun, and the Moon reflects light onto Earth.</i> <i>Because light travels faster.</i> <i>It is the same light from the Sun but has to reach the Moon first.</i> <i>The Sun has UV rays. The Earth has oz one to protect us from these rays.</i> <i>The Moon does not have an ozone layer.</i>	
79	Other incorrect (including crossed out/erased, stray marks, illegible, or off task)	
	Nonresponse	
99	Blank

International Study Center
Lynch School of Education, Boston College

Note: A correct response is based on the mass of water remaining unchanged as a result of freezing (conservation of mass during a change of state). Responses may also address the possibility of evaporation or trapping of air during freezing. A correct code may, therefore, be given for 300 grams, less than 300 grams, or more than 300 grams provided the explanation given makes it clear that the student understands that the mass does not change as a result of the change of state. Explanations that include true statements about density differences but are not applicable to the problem are scored as incorrect (Code 70 or 71).

Code	Response	Item: S022281
	Correct Response	
10	300g. With a good explanation. <i>Examples:</i> 300g. The water changes into the same amount of ice. The same. The water only freezes. The same mass. Nothing disappears. Same. Just because the water is frozen does not mean the water multiplies or gets fewer grams. Same. When water freezes it stays the same weight. Same. Mass is constant through a physical change. The only difference is the density.	
11	Less than 300g. With a good explanation based on some of the water evaporating. <i>Examples:</i> The weight of ice will not change, but a little bit might evaporate. The weight of the ice would be slightly less since some of it will evaporate.	
12	More than 300g. With a good explanation based on the additional mass of trapped air. <i>Examples:</i> More. Water is dead weight, so it has no air pockets. The ice expands so air sneaks in and air has mass. More. Air is being placed when water freezes and traps the air in.	
19	Other correct	
	Incorrect Response	
70	Less than 300g. With no explanation or an incorrect explanation. <i>Examples:</i> Less. Ice has less density, so it weighs less. Less. When water freezes it expands and has a lower density. Less. When water freezes it loses weight.	
71	More than 300g. With no explanation or an incorrect explanation. <i>Examples:</i> More. Ice expands and takes up more space. More. The density goes up when it freezes. More. Ice is heavier than water; a solid is heavier than a liquid.	
72	300g. With no explanation or an incorrect explanation.	
79	Other incorrect (including crossed out/erased, stray marks, illegible, or off task)	
	Nonresponse	
99	Blank

Lynch School of Education, Boston College

Note: A correct response must include a specific effect on wildlife (positive or negative) due to the dam. Vague or general responses that state only that plants/animals will die (or similar) with no specific effect given are scored as incorrect (Code 70). Mentioning only irrigation for farms/crops for human benefit is also scored as incorrect (Code 79). If more than one effect is given, then the code corresponding to the first correct effect should be used even if other incorrect effects are given. Since only one effect is required, the incorrect portion is not considered unless it negates the correct portion of the response.

Code	Response	Item: S032519
	Correct Response	
10	States a specific negative effect of the dam on wildlife (change in habitat, water supply, food supply, etc.). <i>Examples:</i> <i>There will be nowhere for the animals to live.</i> <i>There may be a shortage of water below the dam for wildlife.</i> <i>It could destroy the homes of animals and they would become extinct.</i> <i>Animals that live in the water or need to drink there would not be able to.</i>	
11	States a specific positive effect of the dam on wildlife (change in habitat, water supply, food supply, etc.). <i>Examples:</i> <i>The dam can provide more water for the animals above the dam.</i> <i>Plants in the area would have a permanent source of water so they would not die out.</i> <i>The pool above the dam would create a place for fish to live.</i> Note: Irrigation for human benefit given in the stem is not accepted as a correct positive effect; these responses should be given Code 79.	
19	Other correct	
	Incorrect Response	
70	States only that plants or animals will die or similar. [No specific effect given.] <i>Examples:</i> <i>Plants and animals are going to be destroyed.</i> <i>The wildlife will die.</i>	
71	States an incorrect effect that reflects a misconception about dams. <i>Examples:</i> <i>Electricity will flow through the water and kill the fish in the river.</i> <i>The dam creates radioactivity that can kill the animals.</i>	
79	Other incorrect (including crossed out/erased, stray marks, illegible, or off task)	
	Nonresponse	
99	Blank

Note: A correct response must clearly describe a device or process and be connected to the application of science or technology. Responses that merely state what needs to be done (e.g., locate the oil) are not adequate for a correct code and should be given Code 70. Commonsense, practical responses or those based on individual activities will not be given credit without a clear link to the application of science and technology. Although the stem does not specify whether the technology must be currently available, answers should be reasonable and realistic based on current technology.

Code	Response	Item: S032120A
	Correct Response	
10	Mentions a device/process that can be used to locate, contain, disperse, break down, or collect the oil spills, etc. <i>Examples:</i> <i>Mechanical barriers can be put up to contain the oil.</i> <i>Organisms have been created that can break down oil.</i> <i>Vacuum the oil up.</i> <i>Treat with special detergents.</i>	
11	Mentions a device/process for improving the technology of oil tankers (construction, navigation, communications, etc.) <i>Examples:</i> <i>Make oil tankers with double hulls.</i> <i>Tankers should have separate tanks for oil and ballast water.</i> <i>Develop new, stronger materials for ships that cannot be broken by rocks or icebergs.</i>	
19	Other correct	
	Incorrect Response	
70	Gives only a commonsense response that is too vague or does not specify the application of science or technology. <i>Examples:</i> <i>Be more careful. Don't run into rock.</i> <i>Put the oil on airplanes instead of ships.</i> <i>Fix the ships.</i> <i>Reduce the amount of oil that the tankers carry.</i> <i>Technology can be used to retrieve the oil as it floats in water.</i> <i>Remove the oil.</i>	
79	Other incorrect (including crossed out/erased, stray marks, illegible, or off task)	
	Nonresponse	
99	Blank

Note: To receive full credit, all three substances must be identified correctly. Partial credit is given for responses that correctly identify at least one of the substances. Each substance should only be entered once. If a substance is entered more than once, none of the entries for this substance is counted as correct. For example, if the response is oxygen, iron, iron, then only oxygen is correct and Code 11 is given. If the response is oxygen, oxygen, oxygen or iron, water, water Code 79 is given.

Code	Response	Item: S032680
Correct Response		
20	All 3 substances are identified correctly: X = oxygen; Y = iron; Z = water. Note: The use of the word “air” should not be substituted for “oxygen” for full credit. If “air” is listed, then Code 10 should be used.	
Partial Response		
10	Two substances are identified correctly; one substance is missing or incorrectly specified. <i>Examples:</i> <i>Air, Iron, Water</i> <i>Oxygen, Iron, Liquid</i> <i>Oxygen, Blank, Water</i> <i>Blank, Iron, Water</i>	
11	Only oxygen is correct (X); iron and water are missing or reversed. <i>Examples:</i> <i>Oxygen (air), Water, Iron</i> <i>Oxygen (air), Blank, Blank</i> Note: The use of the word “air” may be substituted for “oxygen” for partial credit.	
12	Only iron is correct (Y); oxygen and water are missing or reversed. <i>Examples:</i> <i>Water, Iron, Oxygen (air)</i> <i>Blank, Iron, Blank</i>	
13	Only water is correct (Z); oxygen and iron are missing or reversed. <i>Examples:</i> <i>Iron, Oxygen (air), Water</i> <i>Blank, Blank, Water</i>	
19	Other partially correct (with at least one substance identified correctly)	
Incorrect Response		
79	Incorrect (including crossed out/erased, stray marks, illegible or off task)	
Nonresponse		
99	Blank

A sound is heard when you pluck a string on a guitar.
What will happen to the sound if the same string is plucked harder?

- (A) The volume will stay the same, and the pitch will be higher.
- (B) The pitch will stay the same, and the volume will be higher.
- (C) Both the pitch and the volume will be higher.
- (D) Both the pitch and the volume will stay the same.

A plot of land was divided into 10 equal areas. A different amount of fertilizer was added to each area. Rice was planted in each area. The table below shows the amount of fertilizer added and the yields of rice for each area.

	Area									
	1	2	3	4	5	6	7	8	9	10
Amount of fertilizer added (units of nitrogen per area)	0	30	50	60	70	80	100	120	140	160
Yield of rice (kg of rice per area)	7.1	8.3	14.2	25.4	26.2	26.2	26.2	26.1	17.6	14.4

Look at the data in the table. Provide an explanation for the effect of the amount of fertilizer on the yield of rice.

Note: Although the question asks for an ‘explanation’, credit will be given for responses that describe the effect of fertilizer on the yield of rice based on the data in the table.

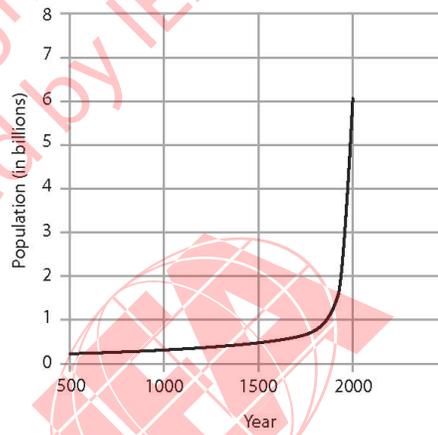

Code	Response	Item: S032555
	Correct Response	
10	<p>Explanation refers explicitly to all three regions of the data table:</p> <p>i) Rice yield (growth) increases as fertilizer level is increased up to the optimum level (70).</p> <p>ii) Rice yield (growth) is greatest over an optimum fertilizer range (70-100).</p> <p>iii) Rice yield (growth) decreases as the fertilizer level is increased above the optimum level (100).</p> <p><i>Examples:</i></p> <p><i>The yield of rice increases for a while, but then it decreases. It should be between 70-100 units. There are not enough nutrients at the low levels and at high levels the fertilizer can kill the plants.</i></p> <p><i>Adding fertilizer will increase rice yields, but adding too much will decrease it. This proves that only a certain range of fertilizers will be best.</i></p> <p>Note: Responses may be quantitative or qualitative in nature. No credit is lost for incorrect or no units.</p>	
11	<p>Refers to an optimum level (range) of fertilizer but description of high or low fertilizer regions (i or iii) is incomplete or incorrect.</p> <p><i>Examples:</i></p> <p><i>Just the right amount of fertilizer must be added.</i></p> <p><i>The best level of fertilizer is between 70 and 100. Above that, the plants start dying.</i></p> <p><i>The rice yield increases up to a maximum level.</i></p>	
12	<p>Refers to lower rice yields at high and low fertilizer levels, but description of optimum region (ii) is incomplete or incorrect.</p> <p><i>Examples:</i></p> <p><i>Too much fertilizer produces less rice. Also too little fertilizer produces less rice.</i></p> <p><i>As you put more fertilizer on, more rice grows. If you put too much, though, the amount of rice will diminish.</i></p>	
19	Other correct	
	Incorrect Response	
70	<p>Mentions ONLY that the rice yield increases with increasing fertilizer level. [No description of regions ii and iii.]</p> <p><i>Examples:</i></p> <p><i>It increased as the fertilizer increased because plants need fertilizer to grow.</i></p>	
71	<p>Mentions ONLY that rice plants will die at high fertilizer level (or similar). [No description of regions i and ii.]</p> <p><i>Examples:</i></p> <p><i>If you put too much fertilizer on, the plant will die.</i></p>	
79	Other incorrect (including crossed out/erased, stray marks, illegible or off task)	
	Nonresponse	
99	Blank

Note: Credit is given for responses that are clearly related to increased survival or lifespan or decreased death rate due to improvements in health care, medicine, nutrition, sanitation, standard of living, etc. If a response mentions scientific advances, technology, or industrialization it must be clear how this is related to an increase in survival rate. If only technology (or similar) is mentioned, then Code 70 should be given. Responses that mention only increased birth rate or reproduction should receive Code 71.

Code	Response	Item: S032122
Correct Response		
10	Gives a correct reason related to increased survival, lifespan, or decreased death rate (or similar). <i>Examples:</i> <i>Advances in medicine.</i> <i>Less deaths at birth.</i> <i>Better living conditions so people are living longer and healthier.</i> <i>Hospitals have better equipment.</i> <i>The sanitation is better.</i> <i>An increase in life span.</i> <i>More births than deaths due to higher standard of living.</i>	
19	Other correct	
Incorrect Response		
70	Mentions technology, scientific advances or industrialization (or similar) but with NO connection to increased survival. <i>Examples:</i> <i>This is due to advanced technology.</i> <i>Because of the inventions that have been made.</i> <i>The industrial revolution.</i> <i>More factories.</i>	
71	Mentions only increased birth rate or reproduction. [No mention of decreased death rate or increased lifespan.] <i>Examples:</i> <i>Everyone is producing more humans every year.</i> <i>People get married earlier and start having babies.</i>	
79	Other incorrect (including crossed out/erased, stray marks, illegible, or off task)	
Nonresponse		
99	Blank
